AKVIS Artifact Remover AI 2.0: New Neural Networks for JPEG Artifacts Removal

March 3, 2022 — AKVIS announces a major update of AKVIS Artifact Remover AI, a free AI-powered program for image enhancement and defects removal. Version 2.0 introduces modernized neural networks for the Low Compression and High Compression image processing modes.

AKVIS Artifact Remover AI enhances the quality of compressed images, eliminating JPEG artifacts and noise. This free program uses machine learning algorithms to get rid of defects. The software includes three modes for different types of images: *Low Compression*, *High Compression*, and *High Compression with Noise*. With the program, users can easily enhance their photographs and repair overly-compressed JPEG images.

Version 2.0 offers the new neural networks for the *Low Compression* and *High Compression* modes. The program now gives better results; it removes defects and artifacts and produces high-quality images without color changes.

Also, the update provides the CUDA-powered module as a separate download, file saving options for Batch Processing, compatibility with the latest versions of Adobe and Corel photo editors, verified support for Windows 11 and macOS Monterey 12, bugs fixes and stability improvements.
