

## CREATE PHOTO COLLAGES IN A FEW CLICKS WITH AKVIS CHAMELEON 8.5

August 1, 2014 — AKVIS announces the update of its collage creation software AKVIS Chameleon. Version 8.5 offers new Share feature, compatibility with Photoshop CC 2014, support for 64 bit.

**AKVIS Chameleon** is efficient photo collage creation software, available as a standalone program and as a Photoshop plugin, in versions for Windows and Mac.

The software creates collages and montages smoothly and seamlessly, adjusting a pasted fragment to a target color range. It is extremely easy to use as does not require precise selection of objects. You can concentrate on the creative part and forget about complicated selection techniques.

With **AKVIS Chameleon** you will have a lot of fun while making photo collages!

The program works in 4 collage creation modes: **Montage, Chameleon, Blend, Emersion**; which process images differently and give different results.

Create customized postcards for your loved ones, make a vacation memory collage or a wedding album using all kinds of photos and backgrounds, correct closed eyes by implanting open eyes from another photo of the series, etc. You can combine images with entirely different color ranges, to create the effect of drawing on a texture surface (crumpled paper, wood, etc), and all that with only a mouse-click!

### In Version 8.5:

- Added the **Share** option that lets users publish pictures from the program to the social networks and services: *Facebook, Twitter, Flickr, Tumblr, Google+, Dropbox*.
- Added compatibility of the plugin with **Photoshop CC 2014**.
- Added support for 64 bit for Windows.
- Fixed minor bugs.
